(54) Title: DEVICE FOR WASHING THE EXTERNAL AUDITORY MEATUS

03/967

(57) Abstract: A device is described for washing the external auditory meatus comprising at least one inlet channel (6) for the washing liquid and one discharge channel (8) which connects the end portion of the inlet channel with the outside environment, the discharge channel being designed to discharge the washing liquid outside if a further channel (9), designed to discharge the liquid and the products of washing (wax, epithelial scales, etc.) outside, is at least partially obstructed by the products of washing. The further channel may consist of the external auditory meatus, of an aural speculum in which the washing device (10) is inserted, or of an outlet channel made in the body of the washing device (10).
